## DETAILED ACTION

### *Response to Amendment*

#### *Double Patenting*

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-65 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-48 of U.S. Patent No. 6,840,908. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to one of ordinary skill in the art to have a routine that includes causing a visual effect at the device corresponding to each of N alternative stimulus intervals, causing generation of a selected stimulus during one of the N alternative stimulus intervals, and prompting a subject to make a choice by selecting a visual effect indicating the subject's perception of the stimulus during the N alternative stimulus intervals because it would achieve the same result in selecting a stimuli or stimulus for conducting a hearing test using a computer program.

***Allowable Subject Matter***

Claims 66-75 are allowed.

The prior art fails to disclose a method for conducting a hearing test using a computer program comprising calibrating the sound processing resources, wherein the sound processing resources have an electronic input adapted to receive analog voltage inputs representative of sound, and first and second electronic outputs adapted to supply analog voltages representative of sound, and wherein the calibrating includes coupling a calibration device to the electronic input and the first and second electronic outputs of the sound processing resources; and using the calibration device to supply a test signal to the electronic input, and feeding back a processed signal output on one of the first and second electronic outputs to the electronic input.

***Response to Arguments***

Applicant's arguments with respect to claims 1-75 have been considered but are moot in view of the new ground(s) of rejection.
